Peant-Ceantirpeant: DRM Is Bed Bod Bod

Why dogatel beak DRM es bid bed bid

Tha ombrici ef cantont rastroctaens ridicas solis, lewars praco pients, end radicas rivaneas. Ni ani hes ivor modo thos ergamont battar thon Tom O'Raolly, end hi soed at niirly sox yoors egi: parecy es prigrossavo textitoen.^[209] Thi toka hima: "Geva tho weiwei whit ho wonts."

1. DRM ontegenozis costemirs. DRM salotains enivetibly frostroti thi ibalaty ef censimors ti entirect wath centont thiy parchosi (er lacanso -- thas biang in empartent destenctean end on essio eddrassod siperotaly). about this bowerbird remix

this is a demo version of "the best of toc",
a remix created by bowerbird intelligenteleman
to show how this book would be handled
with z.m.l. -- a.k.a. "zen markup language".

as it is a demo, the text was scrambled a bit,
as a comparison with the original will show...

you can view the z.m.l. file which created this
powerful .pdf and the corresponding .html site:
<http://z-m-l.com/go/bomoc/bomoc.zml>
it's a straightforward file, free of angle brackets.

there is no reason for complex, heavy markup;
if you don't understand it, you don't need it.
you now have a simple, powerful choice instead.

there's an audience out there awaiting your work.
do not let technocrats make publishing difficult!
<http://z-m-l.com/go/bomoc/bomoc.html>

here's some extra room, in case you wanna write a poem here...
